

Submitter: Mark Cosby
On Behalf Of:
Committee: House Committee On Climate, Energy, and Environment
Measure, Appointment or HB2961
Topic:

House committee on climate change ?

In order to keep the cost of housing less... we shall mandate increases to housing costs.

Cost to put in a EV charger is \$400 (so says google).

That doesn't cover 2 or even 3 new lines to bring the power to the community.

Have you considered the increase demand to the power grid ?

If we want to tear out damn dams we are left with coal and Nuclear, (and with the exception of Gov Mansion we kinda don't like gas for electric needs).

Rumor is you can run a house for 3 days on a EV battery... maybe we aught to charge at work and use the car to run our houses at night ?

This might reduce wildfires and the need for fire risk map Bills, as we would not have lines going to the communities of Oregon.

But I am a no on HB 2961

Mark
