

## **I OPPOSE [SB 630]...The Dumb continue to get dumber.**

\$15 Million dollars in Lottery Bonds to clean-up former landfill sites and build 500 housing units on top of the landfill? Just what is going through your primitive minds? Using Lottery proceeds to pay the debt service on these bonds? What happens when Lottery Monies to pay the debt service fails to meet projected incomes? Say "Hello" to the GENERAL FUND.

Building homes on landfills is very dangerous. There is never enough clean-up.

Gases from decomposition of organic materials and or gases reacting with hazardous wastes will be rising from their graves, fumigating residents in their homes. Subsidence issues are almost a guarantee. Try to re-sale your home when you are in Hospice taking your last breaths.

Then there are the issues surrounding the plague of locusts, the Developers. Why should Developers make any profits from building housing on old landfill sites?

If Oregon is Hell-bent on building housing, build the Housing in Eastern Oregon.

Oregon needs to "depopulate" cities that no-longer have any room for housing and or people. Cities can only grow to the extent of their resources, water being one of them.

Landfills for housing, where have I heard their song before?

Use abandoned landfill sites for open-spaces, like parks but never, build homes on landfills.

David S. Wall

Mr. Oregon Concurs... Have you ever seen methane gas lighting on fire emanating from a landfill? I have. I have also "smelled" it too.
