Of: self

Committee: House Committee On Agriculture, Land Use, Natural Resources, and Water

Measure: HB2659

I oppose HN 2659 for the simple reason that no one has proven changes in climate are caused by human activity. None of the dire predictions of past decades have happened. People have heard the outcries for so long they believe them. This is an unnecessary bill. The Emergency Clause is based on a false premise: health and safety concerns that are unproven. One very critical health and safety concern, and maybe the ONLY critical concern, is the despair felt by those who have bought the lies. It's a major factor, I believe, in the suicide rate in the younger generations. For their health and safety, start publishing proof. In 1999, over 30,000 scientists signed a statement disputing the climate-change lies. I wonder how the elite (who, I also believe, have selfish power-hungry motives to propagate the lies) managed to squelch this.

Don't feed the lie. Don't pass this bill.
