

Submitter: Kathryn Fox  
On Behalf Of:  
Committee: Joint Committee On Semiconductors  
Measure: SB4

I oppose this bill as written since it undermines the Landuse planning laws. Those outside of the boundaries have no say in how their land can be used. This would set a precedent for the future and not allow those affected to have a say. We must be very careful not to use our lands unwisely or before long, we may not have land to raise crops and stock nor wildlands for wildlife. With sights set on future uses i.e., semiconductors, there will be things overlooked and lost which we need more in order to live. Too few leaders have educational backgrounds in earth science and biology. Those leaders aren't even aware of the consequences of what they do. So, I oppose this bill as written.
